GST			\$389.50
TOTAL CHARGE			\$4,284.50

WORK COMPLETED BY Christopher John Pember

27/11 - Arrived on site met George & he showed us where the blockage was. Set up vacuum to suck up pit but water level was too high could not see pipe. Kept on sucking but water level would not drop quick enough due to flow into pit. Could not get any vision and the entry point of the pipe was full of roots. George suggested that downstream manholes must be blocked which was Bayswater shire property so got authorization to pop manholes and clean. 2 hours spent on site.

Work charged to city of Bayswater:

Cleaned last manhole to the river then started to clean upstream. Got about 5 metres in and jet kept getting stuck and lots of white sand coming back. We aborted the jetting to try and get some camera vision but didn't succeed due to level of sand and water coming down. Recommendation-go to middle pit block off 2 lines running into it and suck that pit dry and try and send camera downstream to see if pipe is broken. Then if possible to clear that line unplug other mainline to jet that to the manhole where the original problem starts. Then we'll have a chance of jetting the blockage and getting camera vision in the complex. 4 Hours on that job. Only 2hrs charged Tranby on Swan

06/11 - Arrived on site set up vac/ jet truck, used vac to clear some debris from the pit and cleared large amounts of roots from the bottom of the pit. Jetted the drain line from the internal pit to the property connection cleared multiple blockages in that line. Jetted the line from the man hole in the garden that work has been done on through to the man hole located under the garden shed. CCTV concrete drain and found multiple small root intrusions and 1 large section where the pipe has displaced with a large amount of tree root ingress. that section requires a 1 meter reline. digging is
